SUMMARY

Software Engineering graduate (FAST-NUCES, 2026) who completed an 8-week QA internship at Tron.ai. I build full-stack web applications with React, Node.js and Python, test them thoroughly and ship them with Docker and CI/CD. I also enjoy the people side of software: explaining technical products in plain language, presenting demos, writing clear documentation and following up until work is done. Comfortable with AI tools and flexible working hours, including international time zones.

TECHNICAL SKILLS

Web Development: JavaScript, TypeScript, React.js, Tailwind CSS, Node.js, Express.js, Flask, REST APIs, JWT

Languages & Databases: Python, Java, C++, SQL, MongoDB, PostgreSQL, MySQL

QA & Testing: Functional, Regression, API and E2E Testing; Cypress, Selenium, Playwright, Pytest, Jest, Postman

DevOps & Tools: Git, GitHub Actions (CI/CD), Docker, Nginx, Linux, Render, Vercel, Jira, TestRail, AI tools

Communication & Collaboration: Professional English (spoken and written); product demos and presentations; explaining technical topics to non-technical people; clear tracking, handoff notes and follow-up

EXPERIENCE

QA Intern, Tron.ai — 8-week internship | Lahore

- Learned QA fundamentals: writing test cases and test plans, the bug life cycle, and functional and regression testing of web applications.
- Wrote and ran manual test cases, and reported bugs in Jira with clear steps to reproduce.
- Practised API testing in Postman and got a hands-on introduction to test automation with Cypress.
- Joined Agile stand-ups with developers and followed up on reported bugs until they were fixed and verified.

FINAL YEAR PROJECT

ShopO-AI: AI Price Comparison & Product Authenticity Platform — 2025 – 2026

React, Node.js, Express, MongoDB, TensorFlow.js, Docker, GitHub Actions | Live: shopo-ai.onrender.com

- Built a web app that compares live prices across Amazon, eBay, AliExpress and Daraz and checks whether a product is genuine, with an AI "Best Pick" ranked by price, seller trust and review sentiment.
- Wrote 44 Jest and Supertest tests and set up a GitHub Actions pipeline that tests and builds the Docker image on every push; deployed on Render with MongoDB Atlas.
- Presented and demoed the product to the evaluation panel, explaining its value to everyday users and answering questions on accuracy and reliability.

PROJECTS

- **TaskFlow**: full-stack task manager with JWT login, priorities, due dates and filters (React, Express, MongoDB); 34 API tests, GitHub Actions CI, Docker, live on Render. *Live demo* | *github.com/muhammad-waseel/taskflow*
- **Cypress E2E Test Framework**: 38 data-driven browser tests (Page Object Model) for TaskFlow, run in Chrome and Firefox on every push, plus a daily production smoke test. *github.com/muhammad-waseel/taskflow-e2e-cypress*
- **Automated CI/CD Pipeline**: 6-stage GitHub Actions pipeline (tests, npm audit + CodeQL, Docker build & smoke test, GHCR, Render deploy, live-commit check) for ShipIt, a status page for my apps. *Live demo* | *github.com/muhammad-waseel/shipit-cicd-pipeline*

EDUCATION

BS Software Engineering, FAST-NUCES, Peshawar — Graduated 2026

Certifications: Full-Stack Web Development (Coursera) | Agile Project Management with JIRA (Coursera)

LANGUAGES

English (Professional) | Urdu (Native)
