SUMMARY

Software Engineering graduate from FAST-NUCES with one year of industry QA experience at Tron.ai. Combines full-stack web development in React, Node.js and Flask with test automation (Cypress, Selenium, Pytest) and CI/CD delivery using Docker, GitHub Actions and Nginx.

TECHNICAL SKILLS

Web Development: React.js, TypeScript, JavaScript, Tailwind CSS, HTML5, CSS3, Node.js, Express.js, Flask, REST APIs, JWT

QA & Automation: Functional, Regression, Smoke, API, E2E, Cross-Browser and Load Testing; Cypress, Selenium, Playwright, Pytest, Jest, Supertest, Postman, Locust, Jira, TestRail

DevOps & Cloud: GitHub Actions (CI/CD), Docker, Docker Compose, Nginx, PM2, Linux, AWS Elastic Beanstalk, Render, Vercel, GHCR, MongoDB Atlas, Git, GitFlow

Languages & Databases: Python, Java, C++, SQL, PostgreSQL, MySQL, MongoDB, Redis

EXPERIENCE

QA Engineer, Tron.ai 2025 – 2026 | Lahore

- Owned end-to-end quality for web applications and AI features, from test planning to release sign-off.
- Led functional, regression, smoke and cross-browser testing cycles before every production release.
- Validated REST APIs in Postman and built Selenium and Cypress suites that replaced repetitive manual runs.
- Reported defects in Jira with precise reproduction steps and partnered with developers in Agile sprints.

FINAL YEAR PROJECT

ShopO-AI: AI Price Comparison & Product Authenticity Platform 2025 – 2026 | Team of 2

React, Node.js, Express, MongoDB, TensorFlow.js, Puppeteer, Docker, GitHub Actions, Render GitHub | Live demo

A web app that compares live prices across Amazon, eBay, AliExpress and Daraz and tells shoppers whether a product is genuine before they buy.

- Built multi-store scrapers and an AI “Best Pick” ranked by price, seller trust and review sentiment, plus QR-code and CNN image verification, voice and image search, wishlists and email price-drop alerts.
- Wrote 44 Jest and Supertest unit and integration tests covering auth, search, verification and alerts, with scrapers mocked for reliable runs.
- Set up a GitHub Actions pipeline that tests, builds and validates the Docker image on every push; deployed the container on Render with MongoDB Atlas.

PROJECTS

TaskFlow: Full-Stack Productivity App GitHub | Live demo

Responsive task manager with JWT authentication, priorities, due dates and a secure REST API, built with React, Express and MongoDB, Dockerized and deployed on Render.

Cypress E2E Automation Framework GitHub

Page Object Model suite of 30 data-driven tests for TaskFlow auth, tasks and filters, run in Chrome and Firefox via GitHub Actions on a Dockerized stack, plus a daily production smoke test.

Automated CI/CD Deployment Pipeline GitHub | Live demo

GitHub Actions pipeline that tests, audits and scans a Node.js service, builds and smoke-tests a Docker image, publishes it to GHCR and deploys to Render, verifying the live commit.

EDUCATION

BS Software Engineering, FAST-NUCES, Peshawar Graduated 2026

Key coursework: Software Quality Engineering, Web Engineering, Database Systems, Software Design & Architecture

LANGUAGES

English (Professional) | Urdu (Native) | Punjabi (Native)
