SUMMARY

Software Engineering graduate (FAST-NUCES, 2026) who enjoys explaining technology in plain language and turning conversations into next steps. One year of QA work at Tron.ai built strong habits for this role: logging every issue the same day, writing clear handoff notes, and following up until things are closed. Because I build software myself, I can quickly learn a product like Z360, understand a clinic's problem, and explain how AI tools solve it. Available for U.S. business hours, Monday to Friday.

KEY SKILLS

Communication & Outreach: Professional spoken and written English; clear emails and messages; product presentations and live demos; explaining technical products to non-technical people; consistent follow-up

Organisation & Tools: Same-day logging and tracking in Jira and TestRail (CRM-style pipelines); handoff notes; Agile sprints; quick to learn new CRMs and AI tools

Product & AI Understanding: Built an AI product end to end (pricing, reviews, sentiment analysis); comfortable using AI tools for research and writing

Technical (bonus): JavaScript, Python, React, Node.js, Express, MongoDB, SQL, REST APIs, Git, Docker, GitHub Actions, Cypress, Postman

EXPERIENCE

QA Engineer, Tron.ai 2025 – 2026 | Lahore

- Logged every defect in Jira the same day with precise steps and clear next actions, so nothing was lost between teams.
- Wrote handoff notes for developers and followed up on each issue until it was fixed and verified.
- Worked in Agile sprints with developers and product owners; shared recurring problems so the team could fix root causes.
- Tested web apps and AI features before every release (functional, regression, API); automated repetitive checks with Selenium and Cypress.

PRESENTING & PITCHING

ShopO-AI: AI Price Comparison & Product Authenticity (Final Year Project) 2025 – 2026

Live: shopo-ai.onrender.com | Code: github.com/muhammad-waseel/ShopO-AI

- Presented and demoed the product to the university evaluation panel, explaining the problem, the solution and its value to everyday shoppers.
- Pitched a simple story: compare prices across Amazon, eBay, AliExpress and Daraz, then tell the buyer whether the product is genuine.
- Built the AI "Best Pick" that ranks offers by price, seller trust and review sentiment, so I understand how AI products create value for users.

TECHNICAL PROJECTS (I CAN CODE)

- **TaskFlow**: full-stack task manager with login, priorities and due dates (React, Express, MongoDB), live on Render.
- **Cypress Test Framework**: 30 automated browser tests run on every code change via GitHub Actions.
- **CI/CD Pipeline**: GitHub Actions pipeline that tests, builds a Docker image and deploys automatically to Render.

EDUCATION

BS Software Engineering, FAST-NUCES, Peshawar Graduated 2026

Certifications: Full-Stack Web Development (Coursera) | Agile Project Management with JIRA (Coursera)

LANGUAGES & AVAILABILITY

English (Professional) | Urdu (Native) | Punjabi (Native) · Available for U.S. business hours (7 PM – 3 AM PKT), Monday to Friday, fully remote
